ShellNest

SUGARCANE FARMING

Company Profile

Cultivating sweet prosperity from South Africa's fertile sugarcane regions.

SUSTAINABLE · SASRI-ALIGNED · KWAZULU-NATAL

CONFIDENTIAL

SHELLNEST (PTY) LTD

2026

Growing South Africa's Sweetest Crop

ShellNest is a developing sugarcane commodity trading company headquartered in Johannesburg, building sourcing relationships in KwaZulu-Natal, South Africa's premier sugar-producing province.

South Africa is one of the world's leading sugarcane producers, and KwaZulu-Natal's subtropical climate provides ideal conditions for high-yield cultivation. ShellNest Sugarcane Farming leverages this natural advantage with modern farming practices and a deep respect for the land.

Our operation focuses on sustainable sugarcane cultivation, supplying raw cane to South Africa's sugar mills and contributing to the nation's sugar, ethanol, and bio-energy value chains. We are committed to responsible land stewardship, water conservation, and community empowerment.

> *"From seedcane to harvest, every stalk represents our commitment to quality and sustainable growth."*

Our farming practices align with the South African Sugarcane Research Institute (SASRI) guidelines, ensuring optimal yields while preserving soil health for future generations. We participate in the industry's transformation initiatives and contribute to rural economic development.

Our Mission

To operate a commercially viable and environmentally responsible sugarcane farming enterprise that contributes to food security, rural employment, and South Africa's agricultural economy.

Our Vision

To be recognised as a model sugarcane farming operation that balances productivity with sustainability, innovation with tradition, and profit with community benefit.

From Planting to Harvest

Sugarcane is a perennial crop with a 12-18 month growth cycle. Our farming calendar ensures optimal yields through strategic planting, maintenance, and harvesting.

Feb-Mar	**Land Preparation**	Soil testing, pH adjustment, deep ploughing, and ridging. Irrigation infrastructure checks and repair.
Mar-May	**Planting Season**	Seedcane selection from SASRI-approved varieties. Mechanical or manual planting in prepared rows.
May-Oct	**Growth & Maintenance**	Fertiliser application, weed management, pest monitoring (particularly Eldana borer), and irrigation.
Oct-Dec	**Ripening & Testing**	Sucrose content monitoring. Chemical ripeners may be applied. Harvest scheduling with local sugar mill.
Apr-Dec	**Harvest Season**	Mechanical and manual harvesting. Cane delivered to mill within 48 hours for optimal sucrose extraction.
Post	**Ratoon Management**	Trash management after harvest. Ratoon crops produce 5-8 subsequent harvests before replanting.

Sugar

Raw cane for white and brown sugar production at regional mills

Ethanol

Molasses by-product for bio-ethanol and industrial alcohol

Bio-Energy

Bagasse fibre for co-generation of electricity at mills

03 — OUR APPROACH

Sustainable Farming, Lasting Impact

Water Conservation

Drip and micro-sprinkler irrigation systems minimise water usage. Mulching with harvested trash retains soil moisture and reduces runoff.

Soil Health

Green manure cover crops, controlled traffic farming, and regular soil analysis ensure long-term fertility and prevent degradation.

Integrated Pest Management

Biological control of Eldana borer through habitat management and natural predators. Minimal chemical intervention philosophy.

Community Employment

Seasonal and permanent employment for local communities. Skills development and training programmes for farm workers.

04 — INDUSTRY CONTEXT

The South African sugar industry contributes approximately R14 billion to the national economy annually. KwaZulu-Natal produces over 80% of the country's sugarcane, making it the heartland of South African sugar production.

As a developing participant in this vital industry, ShellNest aligns its trading approach with the regulatory framework of the South African Sugar Association (SASA) and the Sugar Industry Agreement.

The industry is undergoing transformation, with increased emphasis on new farmer entry, land reform compliance, and value chain diversification. ShellNest is positioning itself to participate in this transformation.

Beyond raw sugar, the industry's diversification into ethanol, co-generated electricity, and speciality sugars presents significant growth opportunities for our operation.
